

DECLARATION OF PFAS (Per- and polyfluoroalkyl substances)

To the best of our current knowledge based on formulation review and on the information from supply chains, the products listed in table 1 below do not contain intentionally added Per- and Polyfluoroalkyl substances (PFAS) as raw materials.

However, other products containing PFAS are listed in table 2, on page 2. The components concerned are either molded fluoropolymers parts or gaskets. Due to their formulation with larger molecular weight materials, they are said to be non-bioavailable and considered to be polymers of low concern. Therefore, the compliance of the listed items with further regulations, such as food contact requirements or REACH, is as of the date of this document not affected.

However, it is the responsibility of the manufacturer or importer of the flowmeters/components to determine consumer safety and ensure compliance with all international, federal, state, and local regulations of PFAS substances.

For any further questions or concerns, please contact your account manager or Digmaesa directly at quality@digmaesa.com.
